Open Invited Track on:

## Recent Advances in Fuzzy Control: Theory and Applications

Code for submitting contributions: **sf983**

<https://www.ifac2020.org/call/open-invited-tracks/#oi88>

Track co-chairs:

**Zsófia Lendek**, *University of Cluj-Napoca, Romania* ([zsafia.lendek@aut.utcluj.ro](mailto:zsafia.lendek@aut.utcluj.ro))

**Miguel Bernal**, *Instituto Tecnológico de Sonora, Mexico* ([miguel.bernal@itson.edu.mx](mailto:miguel.bernal@itson.edu.mx))

**Kevin Guelton**, *CReSTIC - University of Reims Champagne-Ardenne, France*, ([kevin.guelton@univ-reims.fr](mailto:kevin.guelton@univ-reims.fr))

Coordinating and supporting committees:

The main sponsor of this open invited track is the **IFAC TC3.2 « Computational Intelligence in Control »**<sup>1</sup>. It is also supported by the **IEEE CIS Task Force on « Fuzzy Control Theory and Application »**<sup>2</sup>.

Aim and scope:

The aim of this open invited track is to present state-of-the-art results in the area of theory and applications of fuzzy-model-based control design and analysis at large, and to get together well-known and potential researchers in this area. Fuzzy-model-based control provides a systematic and efficient approach to the analysis and control of nonlinear systems. It has been employed to deal with a wide range of nonlinear control systems such as continuous-time, discrete-time, hybrid, sampled-data, time-delay, switching, adaptive control systems and so on. However, there is still room for improvement of the existing results in order to propose new techniques for control. This open invited track focuses mainly on the fuzzy-model-based control systems and analysis with emphasis both on theory and applications. Important problems and difficulties in fuzzy-model-based control systems will be presented, solutions will be provided and methodologies will be proposed to handle nonlinear systems using fuzzy-model-based control approaches. The session will cover classical Takagi-Sugeno, Type 2 and polynomial fuzzy models for stability, control and estimation, representing an important field of the TC 3.2, Computational Intelligence in Control.

Topics:

The main topics of this open invited track include, but are not limited to:

- Takagi-Sugeno fuzzy control systems,
- Uncertain fuzzy systems,
- Type 2 fuzzy systems,
- Fuzzy hybrid systems,
- Fuzzy switching systems,
- Fuzzy time-delay systems,
- Fuzzy stochastic systems,
- Fuzzy polynomial systems,
- Stability analysis of fuzzy systems,
- Nonlinear control design based on fuzzy systems,
- Predictive control,
- Robust control,
- Sampled-data control,
- Filtering.

**Submission deadline: 31 October 2019**

**Submission code: sf983**
